

Helix Forge LLC

CAPABILITY STATEMENT · CYBERSECURITY

Practical cyber protection for small businesses, construction, commercial and the trades

SBA-CERTIFIED SDVOSB · VOSB

VETERAN-OWNED · POTTERTVILLE, MI

Helix Forge LLC is a Michigan cybersecurity company owned by a service-disabled Army veteran. We help small businesses, especially construction firms, commercial companies and the trades, close the everyday gaps that lead to stolen accounts, fake invoices and ransomware. We work as a prime on small, well-defined scopes or as an SDVOSB subcontractor and teaming partner to larger firms.

CORE COMPETENCIES

- **Account and access review.** Find admin accounts, shared logins and former-employee access; turn on two-step login (MFA) where it matters most.
- **Business email protection.** Microsoft 365 and email security review, plus SPF, DKIM and DMARC checks so criminals cannot easily send mail as you.
- **Payment-fraud prevention.** Check invoice and vendor-payment risk and set simple staff habits for confirming any change to bank or payment details.
- **Exposure scanning.** Scan public-facing websites and network devices, always under a signed, written authorization.
- **Backup and recovery review.** Confirm backups exist, are protected and can actually be restored.
- **Ongoing monitoring and subcontract support.** Intrusion monitoring with plain-language briefings after fixes are made, and cyber support for primes on a bid or task order.

Contractor Cyber Hardening Sprint **\$1,500 fixed price**

External exposure scan · Microsoft 365/email security review · SPF, DKIM and DMARC check · MFA and admin-account review · invoice-fraud and vendor-payment check · backup and recovery review · written findings ranked by risk · one remediation session included. Findings within 5 business days, with a written report and a walkthrough call.

DIFFERENTIATORS

- **Service-disabled veteran owned.** SBA-certified SDVOSB and VOSB. Helps agencies and primes meet veteran small-business participation goals.
- **Knows the job site.** Founder has 20+ years in construction and underground utilities, so we understand how contractors, subs and field crews actually work.
- **Fixed price, plain language.** Clear scope and price up front. Reports written for owners and office managers, not just IT staff.
- **Authorized and human-reviewed.** No testing without written permission. Tools flag issues; people review every finding before it is reported.
- **Real attack data.** Our own sensor network has logged more than 1.4 million real attack attempts (Feb–Aug 2026). Proprietary technology with a patent filing in preparation.

PAST PERFORMANCE AND READINESS

Helix Forge is a new company and has no contract past performance yet. Relevant founder experience and readiness:

- **Federal site work:** founder's project work on federal contracts at Department of Energy sites (Savannah River Site, Oak Ridge National Laboratory) under federal site-compliance rules.
- **Security operations:** designed and runs an in-house security test and sensor network, operating since February 2026.
- **Registered and certified:** SAM.gov active; State of Michigan SIGMA vendor; SBA SDVOSB/VOSB approved September 29, 2026.
- **Federal R&D:** submitted a concept white paper to the U.S. Army xTechSearch 10 competition (October 2026).
- **Support network:** working with the APEX Accelerator and the Small Business Development Center (SBDC); ISSA member (Grand Rapids chapter); Lansing Regional Chamber member.
